ATTENDEES

Brett Anglin, JCSO; David Fortino, Jail Superintendent; Jolene Kron, SBH-ASO; Jim Novelli, DBH; Tonya Ferguson, DBH; Dunia Faulx, JHC; Adam York, JHC; David Carlbom, Medical Program Director for JeffCo EMS; Lisa Grundl, HFPD; Aimee Dubbs, HFPD; Lori Fleming, CHIP/BHC.

Links: Meeting Video, please note meeting materials for all the BHC's Data Subgroup can be accessed from the Behealthyjefferson.com >> BHC> BHC Data Subgroup page. Check there for updated document links if you encounter broken links in any of these meeting materials.

DISCUSSION NOTES AND NEXT STEPS

Coding Approach

Lisa Grundl showed the code list available in the ESO data storage system used by EMS provider, and we explored how we might begin to integrate EMS codes with the Law enforcement's three major categories of Alcohol, Drugs, mental health.

Group discussion yielded a next steps:

- Lori to create a spreadsheet with Master list of ESO categories, a tighter grouping, and the simplest grouping typed out. This will be sent to Carlbom, who will review/refine and pass on to Dunia (anyone else?) for another set of eyes on what is shaping up.

- Once list is established, Dr. Carlbom will look to identify any standard definitions from across the state we might follow, then will reach out to Fire Districts to implement the proposed coding approach.

R.E.A.L. Program Data

Jolene noted the data requirements are being changed and a new template is expected in the next 2-3 weeks. Whatever data is shared with the BHC will need to be expressed in de-identifiable aggregate form. The group discussed, then clarified we'd like to focus on:

- Referral Sources (and by extension look at stats like: out of 15 referrals, 12 were from Law Enforcement, of those 50% were referred to X type of treatment (what are hi-incidence-challenges), on average X # of visits occur per participant. Jolene noted they would be tracking response times.

- Dr. Carlbom noted asked if we could track any outcomes or impact – like after so many visits individual is housed, etc. Descriptive statistics – on average one individual has needs in x # of areas…

Housing – Stable / Unstable

- Brett noted law enforcement exploration did not reveal a good way to do this, and the same for the Jail/David Fortino.

- Lisa noted the REAL data may be a chance to better get our arms around unstable housing because we'll be intercepting individuals at a different stage of the timeline.

Law Enforcement / JeffCom Database Merge

- Brett noted law enforcement data base programs are being merged with JeffCom – and this may make getting historical data more complex in that there will be re-organized categories labelled differently.

Defining "Medium Level" Categories

Dr. Carlbom gave input to what we might consider for Medium Level categories.

Training for coding consistency

- Dr. Carlbom will take point on that for pre-hospital players, and hence we won't need separate funding for that training.

Jail/ Residential Program Reporting – Dave Fortino

- Amy compared Jail data from David Fortino and Believe in Recovery Data and it looks similar. Gabbie has BiR has 1/10th of 1% funding and we want to use her data for that, and Jail/Dave Fortino's data for the RSAT program that is funded by State.

Upcoming PIMS Changes

Lori reviewed upcoming changes to the HRSA Performance Indicator Measures System report (PIMS)

Next Meeting: Thursday, June 2, 2022 @ 3pm.

Action: Lori sent out evites with zoom link to hold the spot in our calendars.
